

INSTRUCTIONS FOR HOW TO USE VOCAREUM

When you login into the system, you should be taken to a page with your course listed on it. Please select “Details” button which will take you to a page which will list the assignments for the class. Select the assignment to continue to work on it.

Vocareum assigns you a directory "work area" which you can modify. Once you are satisfied with your work, you can "submit" the assignment. Submission makes a copy of your work area and stores it. This will be the work you will be graded on. You can continue working and can submit your work as many times as you want until the submission deadline. Your last submission before the deadline will be used for grading.

Homework2a

- “Launch Editor” – will take you to a page where you can edit your work and run the code.

- “Upload Assignment” – if you work on your machine, you can use this button to upload your work to the work area from your machine.
- “Check work area” – runs validation script provided by TA. While additional tests will be run to check your work for grading, this script will help you do some limited validation for your work.
- “Check submission” – runs validation script on your “submitted” work. Please note the difference from “Check work area” which runs validation script on your work area before you submit it.
- “Submit assignment” – as noted above, it makes a copy of your work area and stores it for submission.

Grading

Grading not started

The assignment will be graded after submission .

- “Grading” – once your work has been graded, your grading information as well as any comments provided by your grader will be available here.
